                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-87P16 is from the RPCI-23 Mouse BAC Library constructed by the group of Pieter de Jong.

Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.
                                                                                                                    Mus musculus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (08-AUG-2003) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK.                                                                                                                                                            On Nov 6, 2002 this sequence version replaced gi:23264331.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.lgsc.bcm.tmc.edu/projects/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of Molecular and Human Genetics,

Rach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/cenbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 5 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          shotgun sequence only contigs will be indicated in the feature

On Nov 23, 2002 this sequence version replaced gi:23322024.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
NOTE: This sequence may represent more than one clone.
NOTE: This is a 'working draft' sequence. It currently
consists of 10 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Center project name: GVEC

Submitted (21-NOV-2002) Balzergue S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Evry cedex, FRANCE
PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment (s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at http://dbsgap.versailles.inra.fr/publiclines/. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (http://www.genoplante.com and http://genoplante-info.infobiogen.fr). AJ529544.1 GI.26797804 left border, T-DNA flanking sequence. The present sequence is that of cDNA encoding the human mitotic checkpoint protein Chfr (see AAB20219) having a forkhead associated CC domain (FHA) and a ring finger domain. The protein is required for regulation of the transition of cells from prophase to metaphase during CC mitosis. It has ubiquitin-protein ligase activity. The Chfr checkpoint was evident in primary human cells, but was inactivated in 4 of 8 human CC cancer cell lines in U2OS cells, a mutation was identified, which caused CC a Val to Met amino acid substitution in the highly conserved C-terminal CC ys-rich region of the Chfr protein. In the absence of the Chfr CC checkpoint, cells subjected to mitotic stress condensed their chromosomes despite failing to separate their chromosomes. Chfr may monitor CC centrosome separation. Inactivation of the Chfr gene in human cancer is theorized to underlie the increased sensitivity of cancer cells to CC antimitotic drugs. Nucleic acids comprising the present sequence, or Sequences encoding at least amino acids 31-103, 303-346, 476-641 (or CC their antisense sequences) are claimed. The chfr cDNA was isolated from CC an expressed sequence tag database sequence for cDNAs with FHA motifs. Claimed methods of determining the tumourigenic potential of a cell comprise examining the cell for the presence of chfr nucleic acid comprise examining the presence of chfr nucleic acid of a cell. A composition which inhibits the biological activity of Chfr may comprise a ligand selected from an antibody or its fragment. The Chfr inhibit the activity of Chfr in a cancer cells. Cells inhibit the activity of Chfr in a cancer cells. A colditional antitumour therapies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid sequence of mitotic checkpoint gene encoding a checkpoint with forkhead-associated domain and ring finger protein, diagnosing tumorigenic cells and in screening for anticancer drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2(a); Fig

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                              The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC conjected comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC specification and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers are also useful for the
CC chase easily without any specialised methods. AAH303166 to AAH328 and
CC chase easily without any specialised methods. AAH33629 to AAH33632 represent

                                                                                                                                                                                                                                                                                     The present sequence encodes a FHAR1 polypeptide, which is a member of the RING finger protein family. FHAR1 is useful in the treatment of cancer, and as a vaccine for inducing an immunological response in a mammal. FHAR1 polynucleotides may also be used as a diagnostic reagent through detection of mutations in the associated gene, and for chromosome localization studies, and tissue expression studies. FHAR1 antibodies are useful to isolate and to identify clones expressing the polypeptides, or to purify the polypeptides by affinity chromatography and to treat cancer
                                                                                                                                                                                                                                                                                                                                                                                                                      New FHAR1 polypeptide, a member of the RING diagnosing and treating cancer, and for use

These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoiseis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. parkingon's disease. The present sequence is a coding sequence of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        片
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5
The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the
complementary strand of a polynucleotide which comprises one of the 5602
nucleotide sequences defined in the specification, where the
coligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
coplynucleotide which comprises a 3'-end sequence complementary
to a
coligonucleotide comprises a 3'-end sequence, where the
coligonucleotide comprises a 1'-end sequence, where the
coligonucleotide comprises at least 15 nucleotides and the combination of
the 5'-end sequence'3'-end sequence, where the
coligonucleotide comprises and the combination of
the 5'-end sequence'3'-end sequence, where the
coligonucleotide comprises and the combination of
the 5'-end sequence'3'-end sequence, where the
coligonucleotide comprises and the combination of
the 5'-end sequence'3'-end sequence, where the
coligonucleotide comprises and the combination of
the 5'-end sequence'3'-end sequence'
coligonucleoti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               29-JUL-1999;

AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                       The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isogai T,

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives. and

Claim 1; SEQ ID NO 22; 980pp; English.

cc pathological condition. Antibodies to the proteins can also be used in calleviating symptoms associated with the disorders and in diagnostic cc immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays cc (ELLSA). Disorders which are diagnosed or treated include autoimmune cc diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. carcollants of the breast or liver, cardiovascular disorders e.g. carciac cc arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, cr provided and formation of the content of the content, to maintain organs before cr preparate tissues and in chemotaxis. The polypeptides can also be used coast food additive or preservative to increase or decrease storage cc capabilities, fat content, lipid, protein, carbohydrate, vitamins, contents, contents, contents of the invention. Note: The sequence encodes a novel secreted protein of the invention. Note: The cc sequence data for this patent did not form part of the printed content. The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition.

The invention relates to human novel polypeptides and their associated CC polynicelectides. The polypeptides and polynucleotides are useful in gene CC therapy for treating, inhibiting or preventing neural disorders, immune CC system disorders (e.g. systemic lupus crythematosus, rheumatoid arthritis cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. CC and multiple sclerosis), muscular disorders, respiratory diseases (e.g. CC gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left CC (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left CC heart syndrome), renal disorders (e.g. acute kidney failure and end-stage CC renal disease), hyperproliferative disorders (e.g. Hodykin's disease and CC leukaemia), inflammatory diseases (e.g. septic shock, bursitis and CC appendicitis), allergic reactions and conditions (e.g. asthma), blood CC related disorders (e.g. thrombosis, atherosclerosis and myocardial CC infarction) and cancerous diseases. ```

```
New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                            ij
```

NO 160; 205pp; English

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease. 493 A; 555 C; 539 G; 599 T; 0 ₽, 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                          The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at nucleotide which comprises a 5'-end sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises a 3'-end sequence, where the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. ANH03166 to ANH3628 and represent human amino acid sequences; and ANH3363 to ANH3632 represent flower invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-JUL-1999;

CC Insight cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an ollgonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC englementary strand of a polynucleotide which comprises a 5'-end
CC equence and an ollgonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence complementary to a
CC polynucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC planticularly full-length cDNAs. The primers set can be used in antisense therapy and in
CC particularly full-length cDNAs. The primers are useful for synthesising polynucleotides,
CC particularly without any specialised methods. AAH03166 to AAH328 and
CC cDNAs easily without any specialised methods. AAH03166 to AAH328 and
CC cDNAs easily without any specialised methods. AAH03166 to AAH3283 consent consent invention
CC coresent invention

                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC in diagnosing a pathological condition or susceptibility to a CC pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiovascular disorders e.g. corneal infections caused by Dacteria, viruses and fungi and ocular disorders e.g. corneal infection, CC and many other disorders listed in the specification. The polypeptides CC can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, procean, carbohydrate, vitamins, cc minerals, cofactors and other mutritional components. The present CC sequence encodes a novel secreted protein of the invention. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                           The invention relates to human novel polypeptides and their associated polypucleotides. The polypeptides and polypucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders; immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and eukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial human novel columnia of the

length cDNAs defined in the specification, where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises a 1-end sequence, where the coligonucleotide comprises a 1-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence 3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

                                                                                                                                                                                                                                                                                                                                                                                                                                               CC AAA43426 to AAA45925 represent specifically claimed secreted expressed CC sequence tags (sESTs), isolated from human, mouse, chicken and rat tissue Sources. The sESTs can have a range of activities depending on the CC tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic; CC haemostactic; thrombolytic; antifulamentory; cytostatic; antipacterial; antidiabetic; antistathmatic; vulnerary, antipacterial; CC extended for gene therapy and in vaccines include pressant. The sESTs can be cused for gene therapy and in vaccines. The sESTs are useful as probes for the identification and isolation of full-length cDNAs and genomic DNA C molecules which correspond to the sESTs. Proteins encoded by the sESTs care useful as says for determining biological activity and raising c antibodies. They may be useful for treatment of autoimmune disorders (C (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (C (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation c disorders (Alaheimer's, Parkinson's, Huntington's disease, stroke), coagulation c disorders (Alaheimer's, Parkinson's, Huntington's disease, stroke), coagulation and cord sporiasis. AAA45926 to AAA45931 represent linker variants which are given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                     Query Match

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives. and

SEQ ID NO 322; 980pp; English.

The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a CC pathological condition. Antibodies to the proteins can also be used in CC alleviating symptoms associated with the disorders and in diagnostic CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac carrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, CC neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac carrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, CC neoplasms of the breast or liver, cardiovascular disorders e.g. corneal infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, CC and many other disorders listed in the specification. The polypeptides CC can also be used to aid wound healing and epithelial cell proliferation, CC transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used casabilities, fat content, lipid, protein, carbohydrate, vitamins, CC minerals, cofactors and other nutritional components. The present CC sequence encodes a novel secreted procein of the invention. Note: The gourse and the printed content of t

                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human novel polypeptides and their associated CC polymucleotides. The polypeptides and polymucleotides are useful in gene cc therapy for treating, inhibiting or preventing neural disorders, immune cc system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. casal vestibulitis, nasal polyps and sinustis), reproductive disorders (c.g. systemital disorders, pulmonary disorders, cardiovascular disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left cheart syndrome), renal disorders (e.g. acute kidney failure and end-stage crenal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. asthma), blood crelated disorders (e.g. thrombosis, atherosclerosis and myocardial confarction) and cancerous diseases. Sequences ABX73173-ABX74167 represent conditions (e.g. specific shock) and cancerous diseases.
                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated nucleic acid molecules and their cencoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, corabbite, goats, horses, cate, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a condition antibodies to the proteins can also be used in condition antibodies to the proteins can also be used in condition associated with the disorders and in diagnostic conditions associated with the disorders and in diagnostic conditions are diagnosed or treated include autoimmune conditions. The proteins can also be used in conditions are diagnosed or treated include autoimmune consists of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, construity other disorders e.g. cerebral ischaemia, angiogenesis, consolus many other disorders e.g. cerebral ischaemia, angiogenesis, consolus also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before can also be used to aid wound healing and epithelial cell proliferation, to respectate tissues and in chemotaxis. The polypeptides can also be used as food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, ceapabilities fat content, lipid, protein, carbohydrate, vitamins, ceapabilities and content, lipid, protein of the invention. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                밁
